## Features and benefits

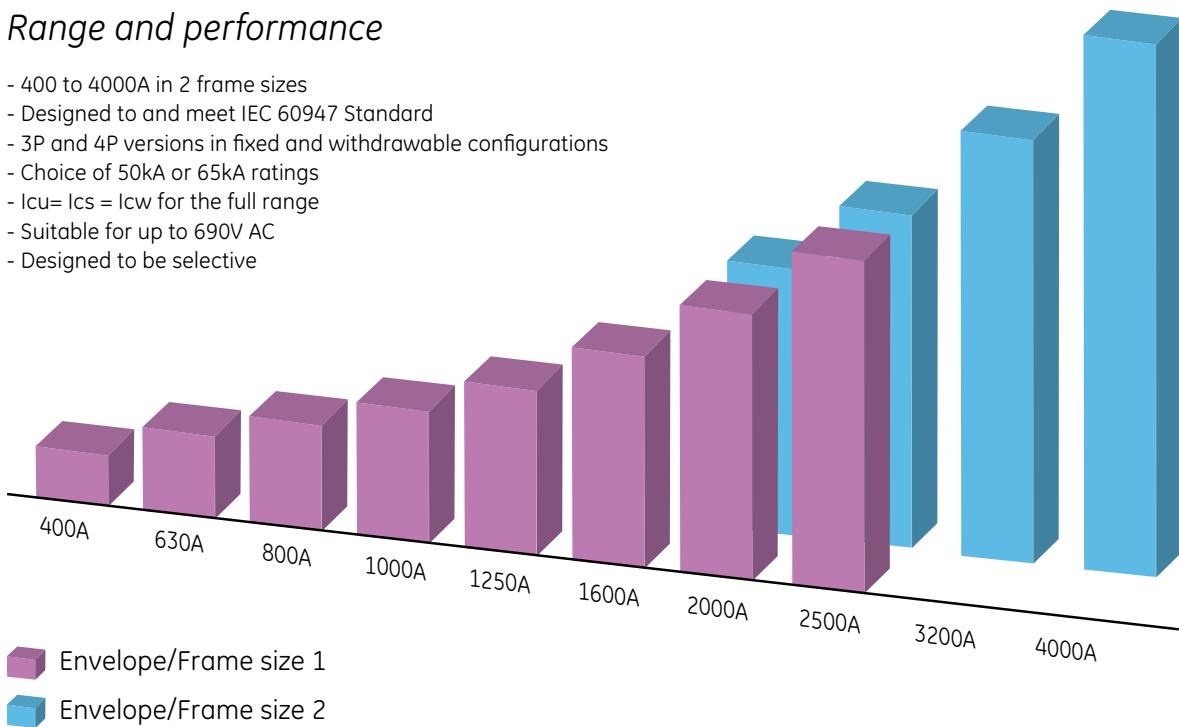

### Line of Air Circuit Breakers

- Evolved from a global platform
- Designed for simplicity
- Manufactured in GE State of the Art Facility

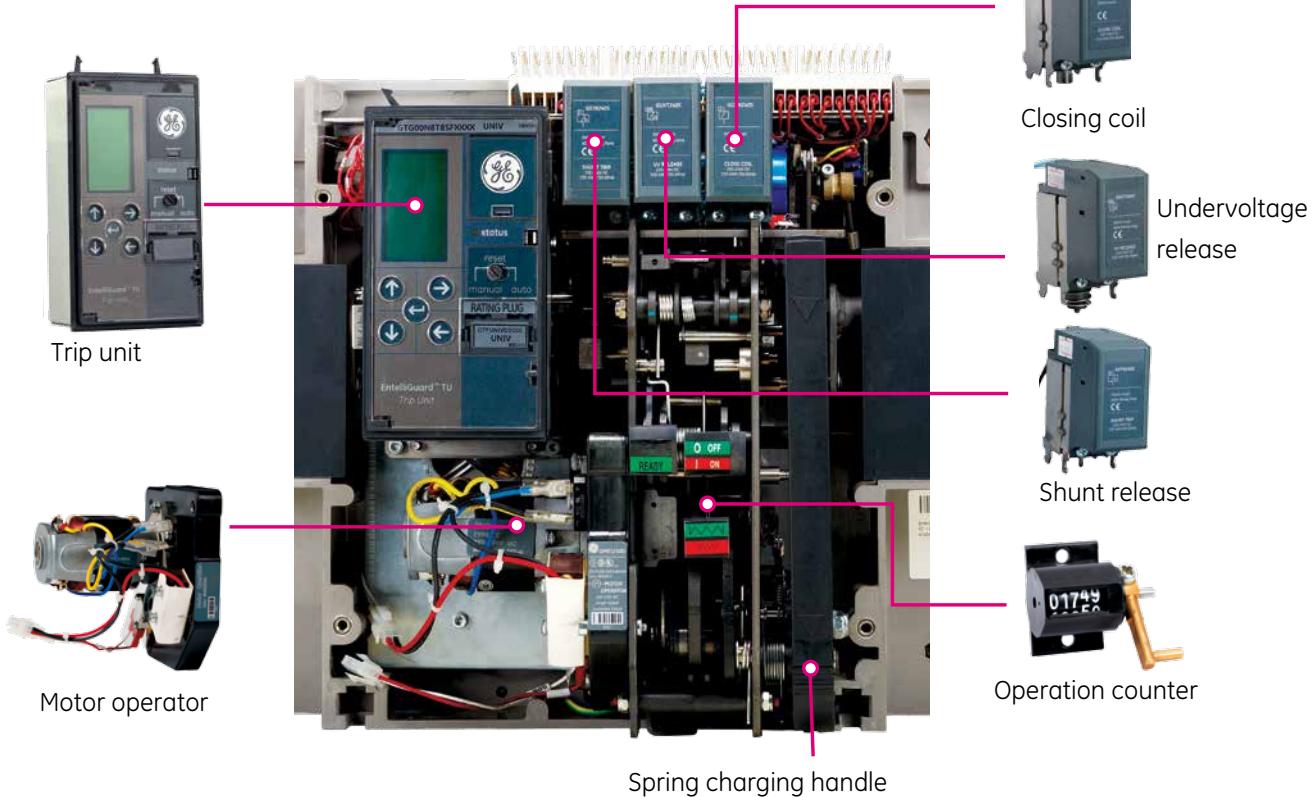

### Range and performance

- 400 to 4000A in 2 frame sizes
- Designed to and meet IEC 60947 Standard
- 3P and 4P versions in fixed and withdrawable configurations
- Choice of 50kA or 65kA ratings
- $I_{cu} = I_{cs} = I_{cw}$  for the full range
- Suitable for up to 690V AC
- Designed to be selective

## Installation

- Compact and modular build
- No derating up to an ambient of 50°C
- Front-mounted snap-fit accessories
- Accessories and control voltage indication on the front fascia

## Protection

- State-of-the-art micro-processor based trip unit
- TRUE-RMS sensing
- Standard large LCD display
- Touch-pad based programming and Navigation
- Micro-processor based trip units offering high accuracy
- Standard event logger and diagnostics

# EntelliGuard® L

## Features and benefits

- ① Installed accessory indicators
- ② Electronic trip unit
- ③ Manual charging handle
- ④ ON and OFF buttons
- ⑤ Contact position indicator ON/OFF
- ⑥ Ready to close indicator
- ⑦ Mechanical spring charge indication
- ⑧ Operation counter
- ⑨ Slot to fix breaker key interlock
- ⑩ Mechanical position indicator
- ⑪ Racking handle pad lock
- ⑫ Racking handle
- ⑬ Name plate with catalogue code

## Advanced electronic trip unit

- ❶ LCD screen with following menu options:
  - **Setup**  
Allows adjustment of values and settings of all parameters
  - **Meter**  
An ammeter is available on all 3 phases and neutral
  - **Status**  
Breaker in ON / OFF / Trip position
  - **Events**  
Trip history with the fault indication
- ❷ 4 settings and 1 enter key to access trip unit functionality
- ❸ Manual or automatic reset facility

## EntelliGuard\*

The EntelliGuard is a line of Air Circuit Breakers developed as a global product meeting IEC standards.

The L version of this breaker is a line of three and four pole devices ranging from 400A to 4000A in two frame sizes with a fault interruption ratings of 50 and 65kA.

The design offer a unique combination of high fault current withstand ratings, short fault interruption times and selectivity.

The device includes a new state-of-the-art highly accurate trip unit that enables the circuit breaker to reliably protect itself and it's environment.

These Power Circuit Breakers are designed to allow multiple interruptions of fault currents and can be used in AC networks with voltages up to 690V.

### Selective and fast

EntelliGuard has been designed to offer an uncompromising combination of a high speed interruption at high fault levels. The circuit breaker is designed to remain closed on a fault as per user settable time value when the fault level lies within the range of short time delay option, and for 15 milliseconds when the fault level attains instantaneous protection range value.

This instantaneous device includes programming that in normal circumstances waits until the downstream breaker trips.

### Uncompromising ... Reliability

EntelliGuard\* has been designed as a modern 'Power Circuit Breaker' without neglecting its GE's heritage of more than 50 years in building Air Circuit Breakers.

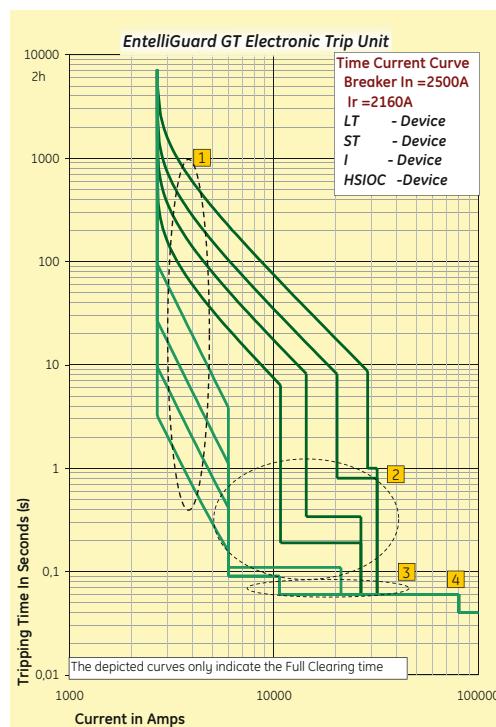

The result: a device with a proven electrical and mechanical life span independent of its operation mode. Be it manual, electrical or by means of the installed shunt and/or undervoltage releases.

### Hi-Performance: complete line

All power circuit breakers are designed to allow multiple interruptions of fault currents. Here the tested and certified service breaking capacity value is in all cases equal to the stated ultimate breaking capacity.

### Hi-Performance: current ratings in enclosures

EntelliGuard\* Air Circuit Breakers have been designed with low power dissipation values and allow relatively high currents at high ambient temperatures.

# EntelliGuard® L

## Basic breakers executed in a fixed mounting pattern

- With Horizontal Rear Connection. (For other options, please refer to page A.7 )
- With auxiliary contact block equipped with 3 NO and 3 NC contacts
- Basic breaker MUST be equipped with a Trip Unit. (Please refer to page A.8 for options)

For 4 Pole Breakers Trip Unit configurable at 0,50 or 100% of Phase rating

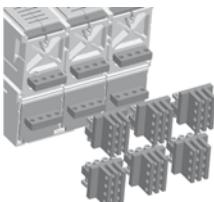

## Termination sets for Breakers & Isolators in fixed pattern

To modify standard connection (horizontal rear) to:

- Vertical rear
- Front flat connection

Sets containing terminals and hardware for the line & load side of the breaker

### Vertical rear connections

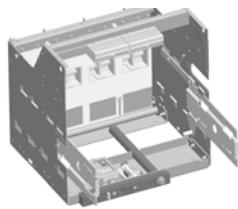

Rating (A)	Suited for use with EntelliGuard -L types	3 pole		4 pole	
		Cat. No.	Ref. No.	Cat. No.	Ref. No.
<i>Terminations for envelope 1</i>					
400 - 1600A	LG version S	L16H4RVI	444441	L16H6RVI	444443
2000 - 2500A	LG version S	L25H4RVI	444445	L25H6RVI	444447
400 - 2500A	LG & LJ versions N & R				
<i>Terminations for envelope 2</i>					
2000 - 3200A	LG & LJ versions C & D	G32M4RVI	408070	G32M6RVI	408071
4000A	LG & LJ versions C & D	G40M4RVI	408072	G40M6RVI	408074

### Front access connections

<i>Terminations for envelope 1</i>	
400 - 1600A	LG version S
2000 - 2500A	LG version S
<i>Terminations for envelope 2</i>	
2000 - 3200A	LG & LJ versions C & D
4000A	LG & LJ versions C & D

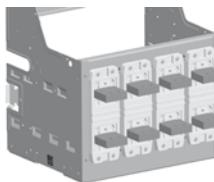

## Cassettes for use with Breakers & Isolators in Drawout pattern

References apply for cassettes supplied in one packaging with Breakers or Isolators  
(For separate cassettes see page A.12)

- With connection modes as indicated in left column
- Each cassette is supplied with safety shutters

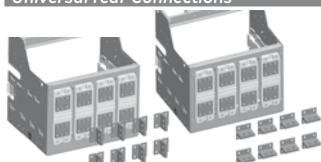

### Horizontal Rear Connections

Rating (A)	Suited for use with EntelliGuard -L types	3 pole		4 pole	
		Cat. No.	Ref. No.	Cat. No.	Ref. No.
<i>Cassette for envelope 1</i>					
1600A	LG version S \ LJ version R	LG16S2HXXXXM	444278	LG16S5HXXXXM	444281
2000A	LG version S \ LJ version R	LG20N2HXXXXM	444284	LG20N5HXXXXM	444287
400 - 2000A	LG version N & R and LJ version N				
<i>Cassette for envelope 2</i>					
2000 - 3200A	LG & LJ versions C & D	LG32D2HXXXXM	444289	LG32D5HXXXXM	444291

Each cassette is supplied with connection pads for Horizontal connections.

### Universal rear Connections

<i>Cassette for envelope 1</i>	
1600A	LG version S
2000 - 2500A	LG version S
400 - 2500A	LG & LJ versions N & R
<i>Cassette for envelope 2</i>	
2000 - 3200A	LG & LJ versions C & D

Each cassette is supplied with connection pads that be rotated and used for Vertical or Horizontal connections.

### Vertical access Connections

<i>Cassettes for Envelope 2</i>	
4000A	LG & LJ versions C & D

Each cassette is supplied with Vertical connections.

### Front Connections

<i>Cassettes for Envelope 1</i>	
1600A	LG version S
2000 - 2500A	LG version S

Each cassette is supplied with connection pads for front connections.

### No Rear Terminals - Breaker Mounted in Cassette

<i>Cassettes for Frame-1</i>	
1600A	LG version S
2000 - 2500A	LG version for S > 1600A, N ≤ 2500A
<i>Cassettes for Frame-2</i>	
2000 - 3200A	LG Version C-D
4000A	LG version C-D (VER VERSION)

## Cassettes for use with Breakers & Isolators in Draw-out pattern

- References apply for separately supplied cassettes for breakers or isolators  
(For cassettes supplied with breaker see page A.5)
- With connection modes as indicated in left column
- Each cassette is supplied with safety shutters

## Cassettes for Draw-out Pattern; fixed portion only

(1) These Parts are supplied as standard along with breakers. (Can also be ordered as Spare).

(2) The original breaker serial number must be indicated on ordering

## Retrofit of existing M-Pact breakers with EntelliGuard L

- Kits applicable for the replacement of complete envelope/frame 1 breakers in a fixed or draw out pattern with cassette.
- Envelope/frame 2 breakers do not require a retrofit kit.
- Allows the use of the existing connection material and fixation holes.
- For the replacement envelope 1 or 2 breaker a new front panel cut out is needed.

## Electronic Trip Units layout & Main menu

### State of the Art Electronic Trip Unit

EntelliGuard\* L Power Circuit Breakers is equipped with a digital electronic trip unit type GT-L, that has a LCD screen providing an ammeter and a touchpad that allows a simple and accurate menu driven adjustment of the breaker parameters.

All functionality is menu driven accessed by using 4 setting and one enter key thus allowing a fast and accurate setting of the device. These have the following functionality.

UP: Scroll up, Increment Value  
DOWN: Scroll down, Decrement value  
NEXT function, next page  
PREVIOUS function, previous page  
SAVE setting into memory

In situations where the installation is not yet connected to the power supply and the device needs to be adjusted and have the installed options set the use of the separately available TESTER with Power Pack is advised. (Cat No. GTUTK20)

In Power On situations the Trip Unit display is only functional when the breaker is carrying at least 20% of its nominal current value. (Single phase)

### SET UP MENU

To enter this option begin the process by pressing the UP or DOWN key until SETUP is selected on the screen... Pressing the NEXT or PREVIOUS key allows one to enter the setup mode.

After selecting this mode all functions can be chosen by depressing the NEXT or PREVIOUS key. Within the setup menu all breaker protection values, trip unit parameters, relaying functions in and outputs, communication and trip unit access codes are set.

Each EntelliGuard\* L Electronic trip units provides long-time over-current protection (LT), long-time delay (LTD/ $t_R$ ) and some form of Short Circuit over-current protection (ST and/or I). Optionally Groundfault protection (GFsum) with a delay funtion (GFDB/ $T_G$ ) can be added.

### METER

To enter this option begin the process by pressing the UP or DOWN key until to METER is selected on the screen.. Pressing the NEXT or PREVIOUS key allows one to view the current in all three phases and the neutral. The ammeter is only available when the trip unit is powered by the distribution or via the external Testkit.

### STATUS

To enter this option begin the process by pressing the UP or DOWN key until METER is selected on the screen. The status option indicates the present status and settings of the trip unit and circuit breaker.

### EVENTS

To enter this option begin the process by pressing the UP or DOWN key until EVENTS is selected on the screen. Pressing the NEXT or PREVIOUS key allows one to access events. Here a total of 10 events with data as, event type and event magnitude are stored. The connection of a 24V DC auxiliary supply to the Trip Unit will expand this option to include a time stamp of each event.

Tripping events as LT, ST, I GF) are visualized with the associated levels. It is possible to clear this so called "trip register" locally.

## Overload Protection LT-C and LTD

### Overload (LT-C) Protection

The EntelliGuard\* GT-L Electronic Trip has an extremely accurate and easy to set overload or Long Time (LT-C) Protection. It is designed to pick up overloads that exceed 112% of the set value within two hours with a tolerance of 10%<sup>(1)</sup>.

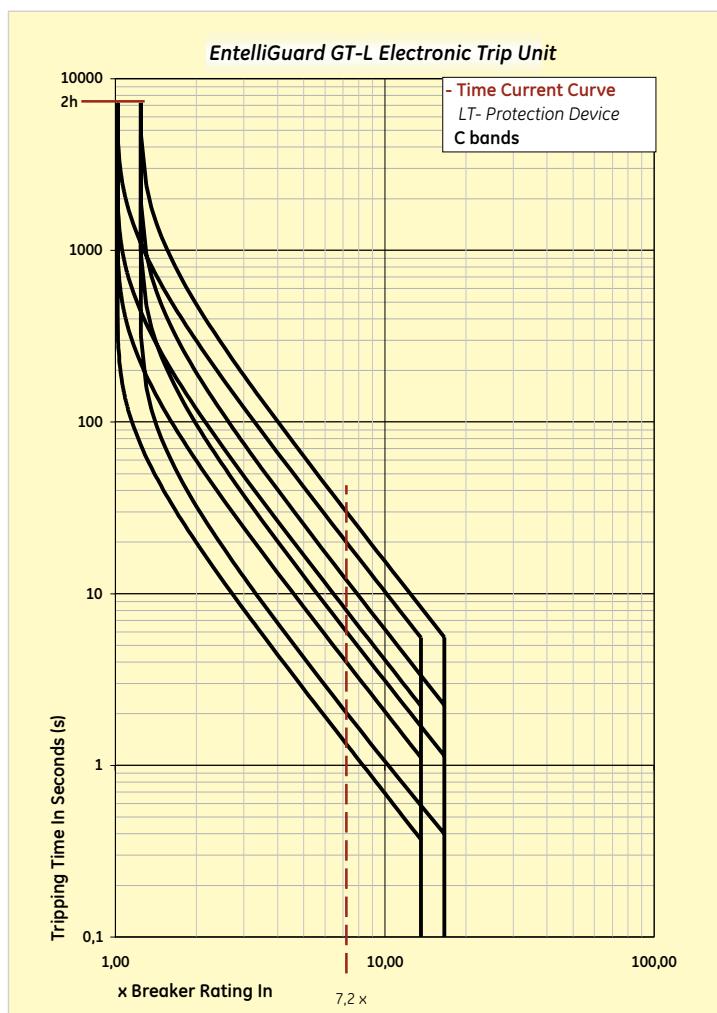

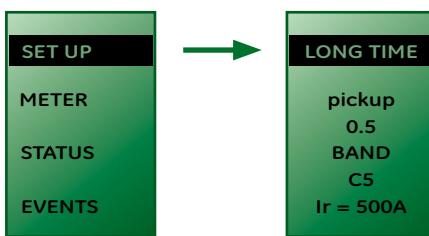

The device has 15 setpoints distributed over a setting range of 0.4 to 1 times the chosen breaker rating ( $I_n$ )

The LT-C type is designed to be used in association with down- and upstream circuit breakers and has a so called  $I^2t$  shape producing a curve form similar to standard industrial thermal magnetic protection devices.

The Time-Current protection curve depicted here is drawn in cold state A cooling function in the device corrects for the heating of the connected lines and equipment.

In order to allow an accurate adjustment to the thermal properties of the protected equipment and to finely match the curve with those of Upstream & Downstream devices 22 time bands are available.

The table indicates the minimum delay time and maximum total interruption times for 3 frequently used reference points on the curve of each band. The graph portrays the LT behaviour for the time-current bands C-4,C-8, C-13 & C-22.

## Short-circuit Protection ST and STDB

### Overcurrent Protection against short-circuit:

#### ST, STDB

The EntelliGuard\* GT-L Electronic Trip and breaker combination can be equipped with a number of different short-circuit protection devices each with their own distinctive properties and field of application.

The Timed Short-circuit Protection Device is designed to offer selectivity over a defined current range and offers a unique combination of multiple time bands and current settings.

To allow selectivity with a wide range of different downstream devices whilst not unnecessarily sacrificing clearing time, 17 different time bands are available. The device has an adjustment range of 1.5 to 12 (+-10%) times the chosen Long Time current value ( $I_{lr}$ ) in steps of 0.5 (pick up setting).

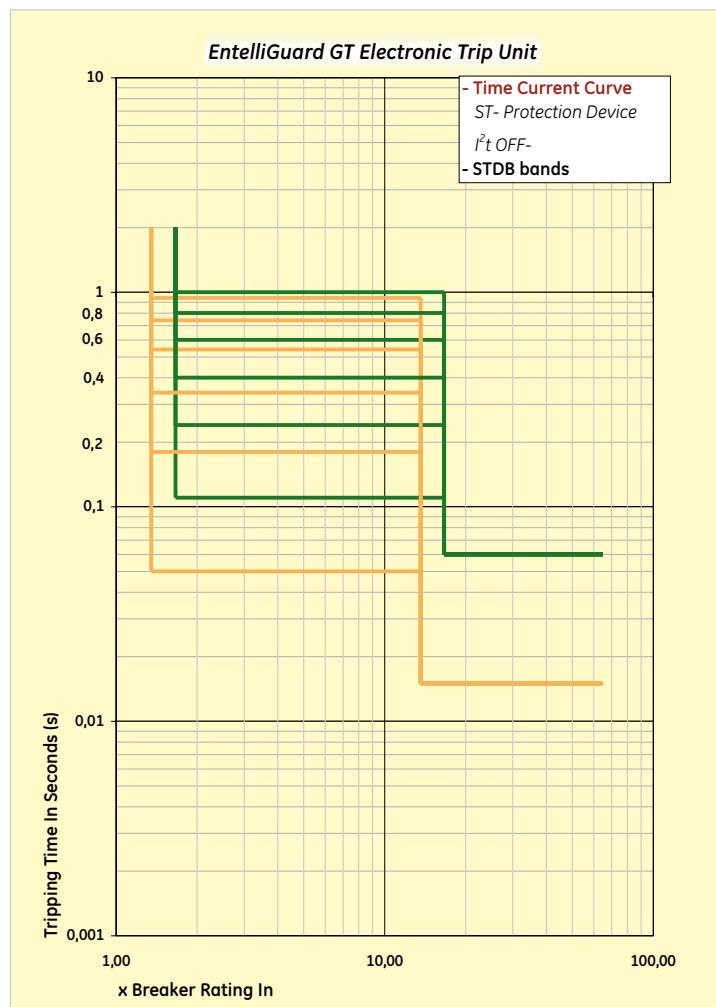

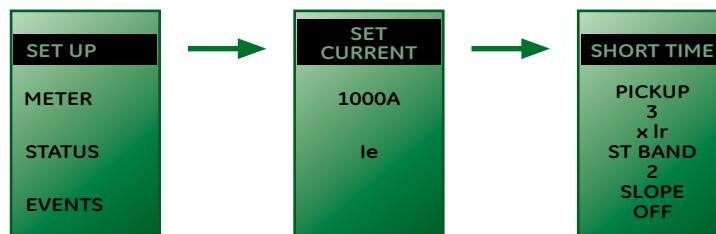

The graph indicates 6 of the available 17 time bands across the full adjustment range. The table contains the minimum delay time and the maximum total interruption times for all time band settings.

#### Timed Short-circuit (ST) Protection $I^2t$ bands (slope)

The ST device can also be set to a  $I^2t$  slope value. The available multiple  $I^2t$  slopes are normally used to achieve selectivity with downstream fuses or to improve selectivity with downstream circuit breakers.

The device has an adjustment range of 1.5 to 12 (+-10%) times the chosen Long Time current value ( $I_{lr}$ ) in steps of 0.5 (pick up setting) and 17 time bands.

There are three available  $I^2t$  slopes ( $K$  set at 3,8 or 18).

Short time tripping times at indicated levels per selected STDB band -  $I^2t$  OFF, in milliseconds

# EntelliGuard\* L

## Short-circuit Protections, I, HIOSC & MCR

### Instantaneous Short-circuit (I) Protection

A user settable device that allows a high speed fault interruption at a pre-determined current level. This device can be used with the short time delayed (ST) short-circuit protection device or as replacement thereof. The device has a current adjustment of 2 to 15 ( $\pm 10\%$ ) times the chosen Primary Current Value ( $I_e$ ) in steps of 0.5.

The device can also be switched OFF.

On breakers with a rating of more than 4000A the maximum setting of  $15 \times I_e$  is in some cases limited to a lower value due to the breaker current rating and its Short-circuit withstand value (see page B.11).

The Instantaneous tripping system used in the EntelliGuard Electronic Trip Unit has a unique programming feature that waits for the downstream device to trip before reacting to an overcurrent fault. This providing the user with a unique combination of **Speed** and **Selectivity**.

*The graph indicates the maximum interruption time and non tripping time across the full current setting band and the transition to the HIOSC protection device.*

### HSIOC Protection device

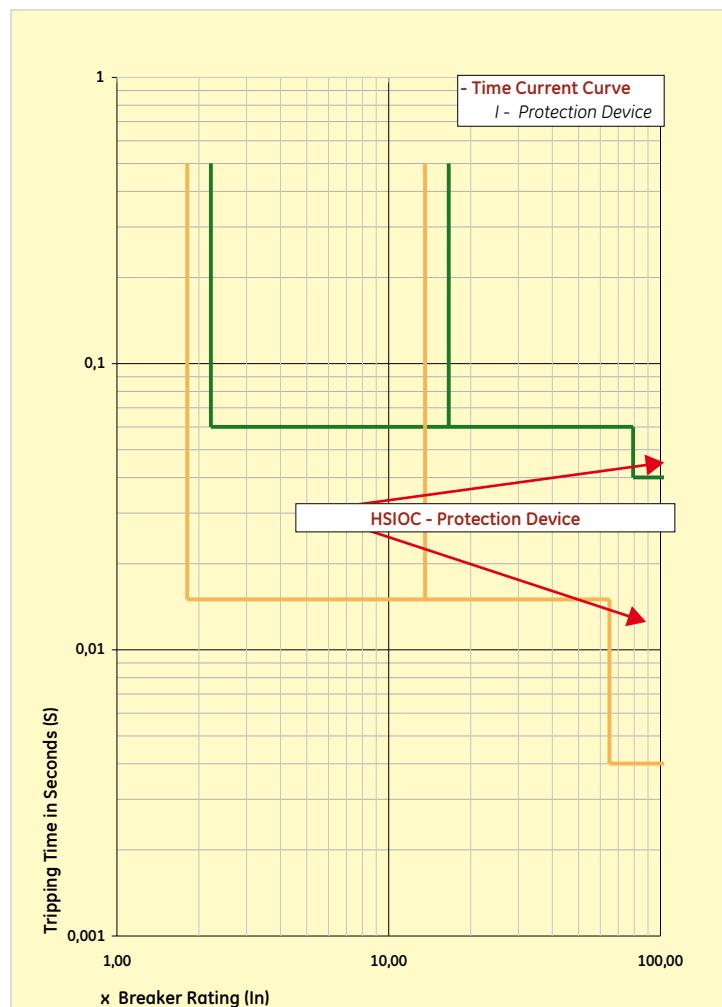

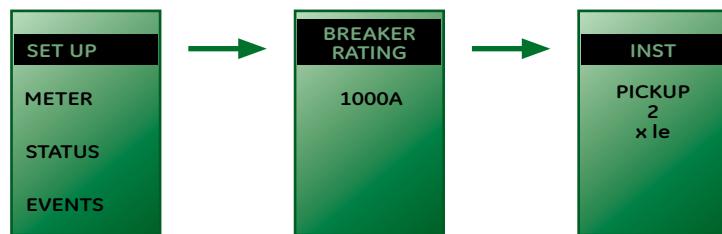

To prevent very hi level short-circuit currents causing damage to their electrical installation and their components EntelliGuard Power Circuit Breaker are equipped with a HSIOC protection device.

This hi level short-circuit device is installed in all EntelliGuard L Breakers and is designed to trip the breaker at the specified  $I_{cw}$  value of the device. The device, interrupts and thus limits the duration of these high level short-circuits to 40 milliseconds.

### Making Current (MCR) Protection device

If a breaker is closed on to a short-circuit current it is mandatory that the device interrupts before the electrical installation and its components incur any damage .

An MCR device is present in all EntelliGuard Power Circuit Breakers specifically designed to trip the breaker when closing onto a fault.

## Ground Fault Protections GF & GFD

### Ground Fault Protection (GFsum)

To protect an installation or a part thereof against indirect contact, Protection Devices can be used to automatically disconnect the power supply when a fault to earth is detected. The HD384 installation standard requires that the mentioned device senses the fault and then interrupts the supply within a specified time frame.

A short-circuit device as an EntelliGuard Power Circuit Breaker can be used to meet this requirement. However these short-circuit protection devices are normally set at values that are too high to detect normally occurring faults to Earth.

The optionally available Ground Fault protection feature is specifically designed to detect lower currents than a standard short-circuit Device and operate by residually summing the current in the Phases and Neutral. When a fault to Earth creates an unbalance in the system the resulting Fault Current is detected by the device that produces an alarm signal or trips the associated circuit breaker thus disconnecting the circuit.

The EntelliGuard Ground fault device has an adjustment range of 0.2 to 1 ( $\pm 15\%$ ) times the chosen breaker rating ( $I_n$ ) and can be set in steps of 0,01 (pick up setting). To allow selectivity with other downstream protection devices there are 14 different time band settings available. The graph indicates a number of the available 14 time bands across the full adjustment range. The table contains the minimum delay time and the maximum total interruption times for all time band settings.

The Ground fault device must monitor the current in all phases and the Neutral. When a 3 pole device is used in a 4 wire (3phase + Neutral) system a 4th sensor must be placed in the Neutral. On use of a 4 pole EntelliGuard breaker the sensor is already present in the Neutral pole.

### Ground Fault Protection $I^2t$ or $I^4t$ bands (slope)

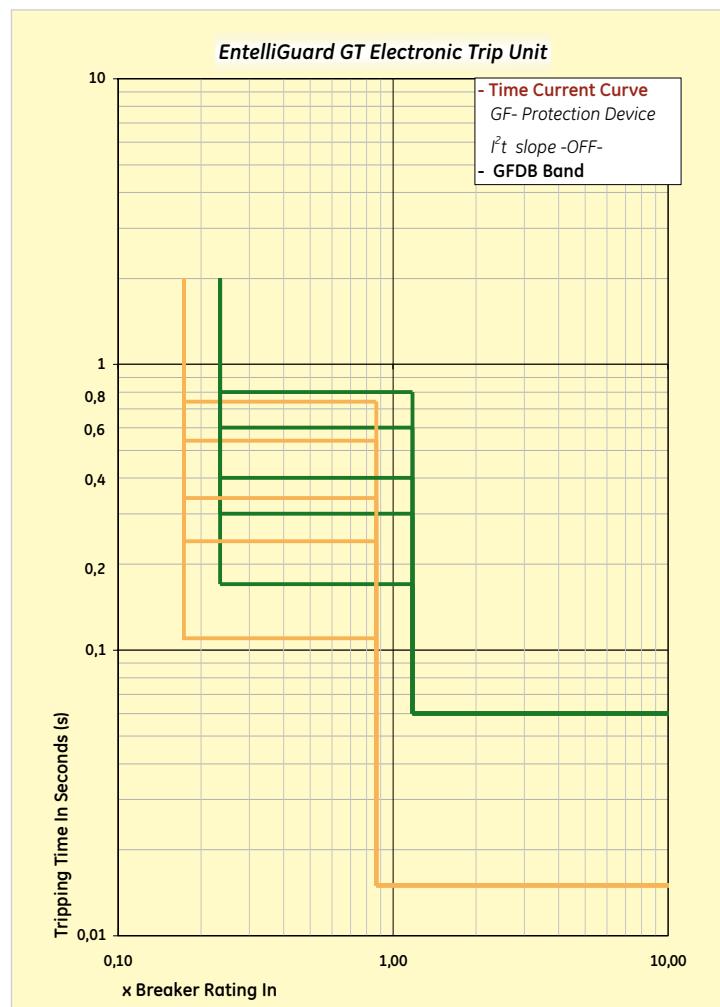

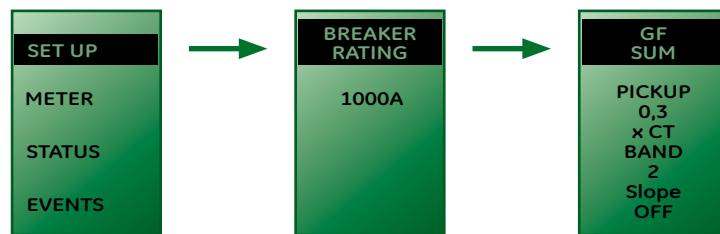

The GF device can also be set to a slope value. The available multiple  $I^2t$  and  $I^4t$  slopes are normally used to achieve selectivity with downstream fuses or to improve selectivity with downstream circuit breakers.

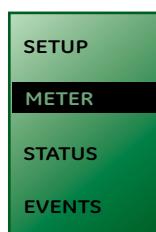

The user has the possibility to choose a current adjustment of 0.2 to 1 (times the chosen the chosen breaker rating ( $I_n$ ) in steps of 0.01 and one of 14 time bands.

There are three available slopes: Low, Medium and High.

Ground fault tripping times at indicated levels per selected GFDB band - $I^2t$  slope OFF, in milliseconds

$x I_r$	1	2	3	4	5	6	7	8	9	10	11	12	13	14
<b>0.2 x Tripping</b>	110	120	140	170	190	240	270	340	400	450	600	700	800	900

<b>0.6 x Tripping</b>	110	120	140	170	190	240	270	340	400	450	600	700	800	900
<b><math>\pm 10\%</math> Non Tripping</b>	50	60	80	110	130	180	210	280	340	390	540	640	740	840

### Ammeter

An Ammeter is supplied with each EntelliGuard® Electronic Trip Unit. The current in each of the three phases and the Neutral can be viewed. The device has an accuracy of 2% when viewed at the nominal current of the breaker and an accuracy of 5% when viewed when the breaker is running at 50 - 85% of its full load.

Parameter	Measured	Units	Resolution	Accuracy at 100% of breaker rating
Current	L1, L2, L3, N	A	0000	2%

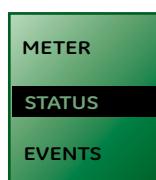

### Trip Reason Indicators (event logging)

#### Trip Operations counter.

The Electronic Trip Unit keeps track of data indicating why the associated breaker has tripped and on how many occurrences have taken place. Accessible under the 'EVENTS' menu the Trip Reason Indicator keeps track of a maximum of 10 events that have caused the EntelliGuard breaker to trip. The device stores the voltage, the phase's involved, the current value, the reason of the trip and the trip number (see counter). When an auxiliary voltage is connected the time and date of the event are also stored.

Accessible under the 'STATUS' menu the Trip Operations Counter registers a maximum of 255 overcurrent faults with their reason. (LT, ST, I or GF-EF). The data can be viewed and reset through the STATUS menu Pickup status option.

### Neutral Protection

When inserted into a 4 pole breaker the EntelliGuard® Electronic Trip Unit senses that the breaker in which the device is installed has a Neutral Pole. Via the set Up menu, a Neutral Setting option then becomes available in which the

LT, ST and I protection device can be jointly set to one of the following values:  
**0%, 50%, 63% or 100%. x the values set for the phase protection device.**

### Reset Choice Function

When a fault has occurred the Trip Unit trips the associated breaker. It is then deemed normal installation practise to verify the reason of the fault before reconnecting power by resetting and switching the breaker on. The advanced options included in the EntelliGuard® Trip Unit provide the user with the fault reason, magnitude and location, thus allowing the user to easily establish the

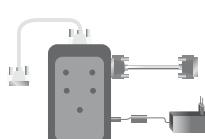

required corrective actions. To follow this procedure Trip Unit reset function should be set to MANUAL. However, in some cases it is required that the breaker resets itself automatically. If this functionality is required, the reset function should be set to AUTOMATIC. A selector switch on the Trip Unit front face allows the user this choice.

### Auxiliary Power Supply

The 24V DC auxiliary supply allows of the trip unit setup function when the standard supply is disconnected. At circuit loads >20% the standard power supply allows full uses of the setup option.

The separately available Test Box Kit can also be used as a temporary power supply. This device has a battery pack and optionally can provide power by using a 24 V DC power supply.

### Test Kit

To verify that the Electronic Trip Unit is interfacing correctly with the Breaker and to establish if the circuitry in the Trip Unit is functioning correctly a test kit is available.

The device has a 24V auxiliary supply to allow its use in a secondary function as power supply of the Trip unit when no network power supply is available. The device can be plugged in to a jack on the trip Unit Front face.

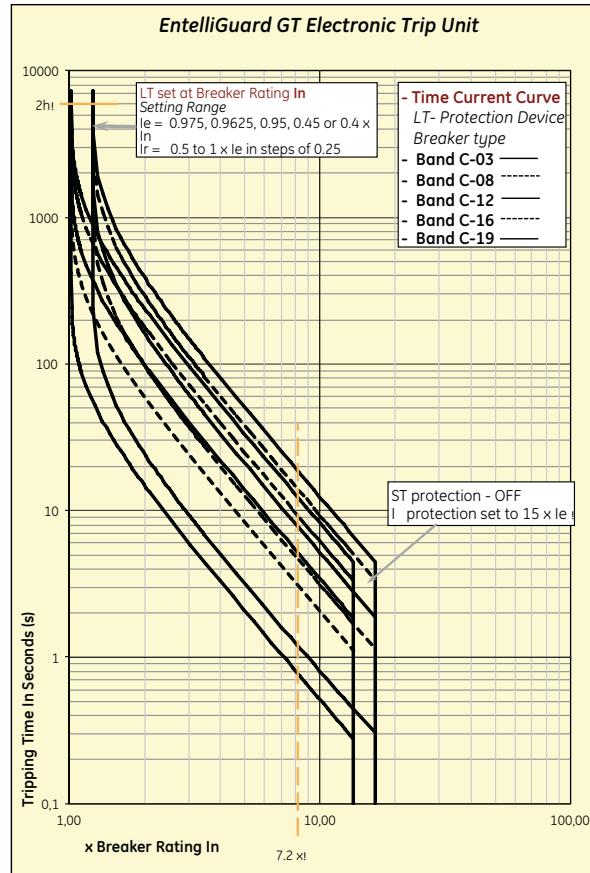

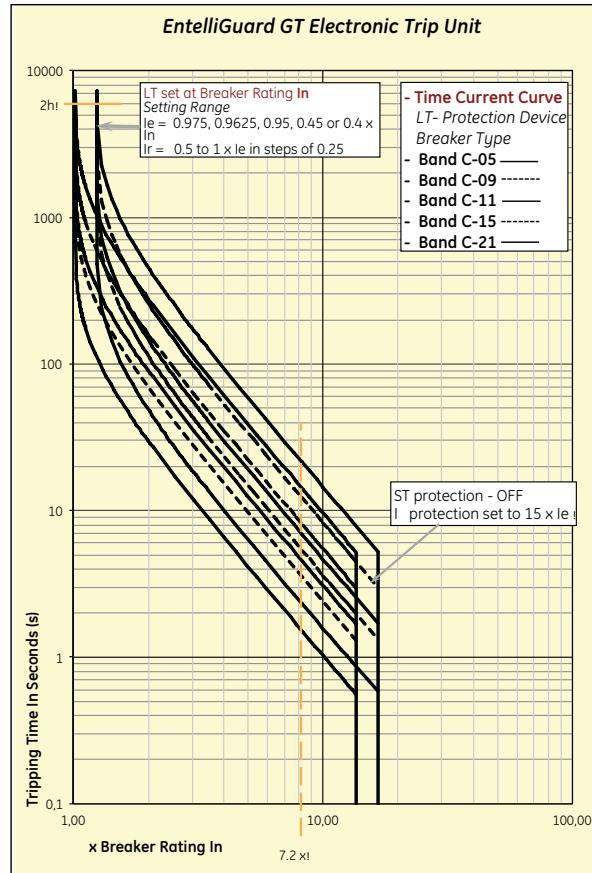

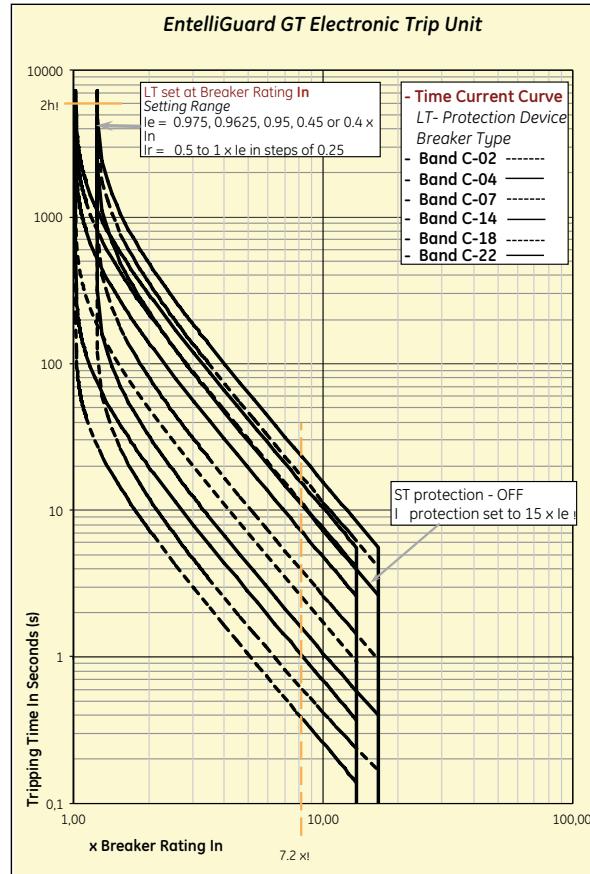

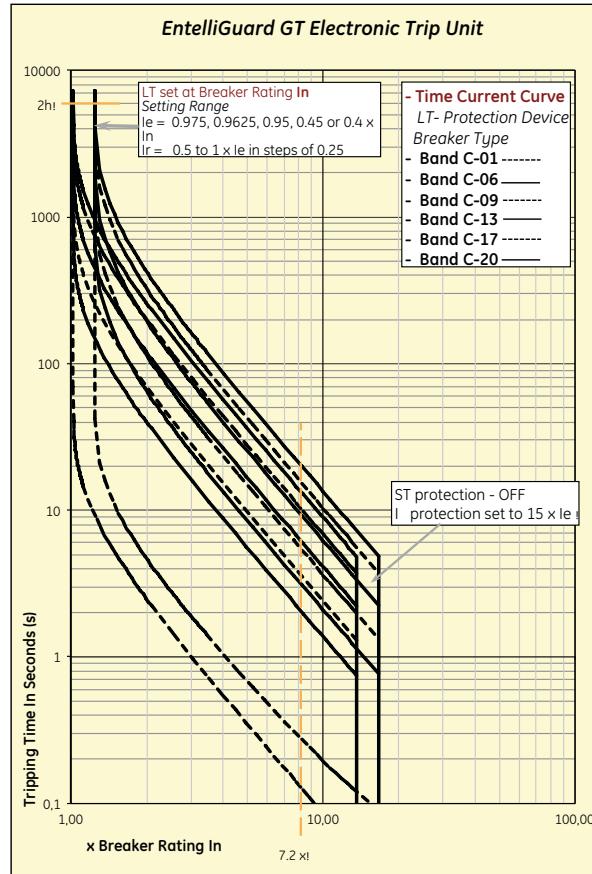

### Trip Unit Toolkit - EntelliGuard manager toolkit

- Compatible with GTU, PremEon S, and MET trip units
- One-to-one connection with trip unit
- WaveForm capture/test available on standard version only
- 407999/GTUTK20 (testkit) is required for interfacing with EntelliGuard trip unit.
- Software free and could be downloaded from this website:  
<http://www.geindustrial.com/products/conversion-kits-and-trip-units/trip-unit-toolkit>

GF Protection Device

### Electronic Trip Units

Denomination	Description
$I_n$	Current rating of Breaker
$I_r$	Current setting
LT	Long Time or Overload protection
ST	Short Time or Timed Short circuit protection
I	Instantaneous Short circuit protection (new IEC reference $I_s$ )
GF	Groundfault
$I_{lr}$	LT or overload Current setting
$I_{st}$	ST or Timed Short circuit Current setting (new IEC reference $I_{sp}$ )
$I_i$	Instantaneous Short circuit Current setting
$I_g$	Ground, or Earthfault Current setting
LTDB	LT or overload time delay band (new IEC reference $t_s$ )
STDB	ST or short circuit time delay band (new IEC reference $t_{sp}$ )
$i^2t$	'Slope' setting on ST or GF device
$i^4t$	'Slope' setting on GF device
$\times LT$	Multiple of LT or overload Current setting
$\times In$	Multiple of Breaker Current rating (In IEC EntelliGuard types = $In$ )
$\times CT$	Multiple of installed sensor rating
I	Standard Instantaneous
MCR	Making Current Release
HSIOC	Hi set Instantaneous protection.

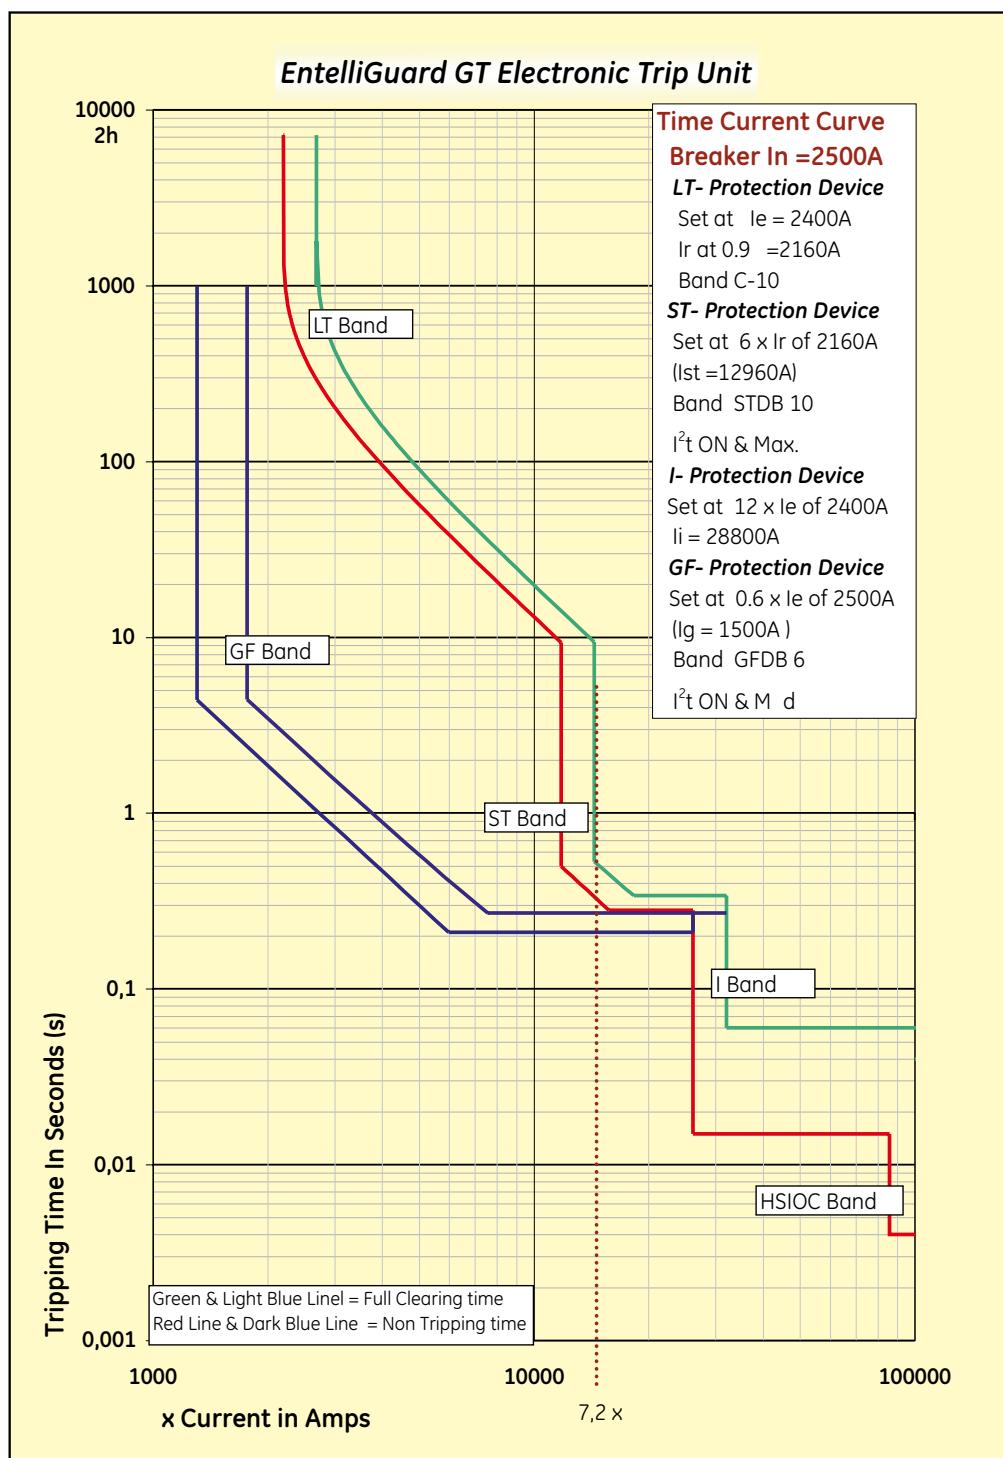

## Time Current Curves (cold state)

Example of Full Time Current Curve

### Time Current Curve

The EntelliGuard\* Electronic trip unit has many sophisticated setting features and an extremely broad setting range. On request we can provide complete Time Current Curves covering all installed protection devices. The curves can be produced for any current setting within the range of the installed protection devices, for one or for a combination of two breakers. Please contact your local GE Sales Office for more information.

## Breaker accessories

### Electrical charging mechanism (motor)

In order to charge the stored energy mechanism electrically, a motor mechanism is available. The design allows factory or field mounting and is available for the full range of EntelliGuard breakers. It is easily fitted with just three bolts.

When the circuit breaker is opened, the mechanism automatically recharges the springs and prepares the breaker for an almost instantaneous reclosure should the need arise.

High speed recharging ensures that the springs are fully charged within four seconds. An optional 'ready to close' or 'spring charging indication' contact is available that indicates that the springs have been recharged and that the breaker can be closed.

The device is available in multiple AC and DC voltages and can be used in a operating frequency of up to two operations per minute. It has a life span equivalent to that of the breaker without maintenance. To switch the EntelliGuard breaker ON and OFF remotely a closing coil and shunt release is also necessary.

### Connections

The motor mechanism connection points can be found on terminal B of both the fixed pattern and draw-out breaker types. Please refer to page C.7.

### Electrical characteristics

Control voltage	Motor operator
Power consumption	
24DC, 110-130DC 220VDC	300W
110-130AC 220 - 240AC	350VA

### Closing Coil

To switch the Air Circuit Breaker ON remotely a closing coil is available that when energized releases the spring charged closing mechanism. The device is available as a factory mounted component or as a field mountable device. It is an extremely easy-to-fit, clip-on unit, with simple plug-in connectors. The coils have a life span equivalent to that of the full breaker life span.

### Connections

The closing coils connection points can be found on terminal B of both the fixed pattern and draw-out breaker types. Please refer to page C.7.

### Electrical characteristics

AC	DC	Power consumption
--	24V	
--	48V	
110-130V	110-130V	
220-240V	220-240V	
380-415V	--	350 VA Inrush

### Shunt release

A device designed to switch the Air Circuit Breaker OFF remotely. When energized, a shunt release instantaneously activates the circuit breaker mechanism thus ensuring a rapid disconnection of the main contacts (50 msec).

All EntelliGuard shunt release are suitable for a continuous power supply and are designed to be used as a closure prevention device when energized.

The device is available as a factory mounted component or as a field mountable device. It is an extremely easy-to-fit, clip-on unit, with simple plug-in connectors.

The individual devices have a wide voltage range, thus limiting the number of devices needed and have a life span equivalent to that of the full breaker life span.

### Undervoltage release

A device designed to open the breaker contacts and to prevent the breaker from closing when in a "No Volt" condition. On a de-energization the undervoltage release activates the circuit breaker mechanism and ensures a rapid disconnection of the main contacts (50 milliseconds). When not re-energized in accordance to the conditions stated in the IEC60947 the device prevents the Air Circuit Breaker from closing.

The EntelliGuard undervoltage releases are designed to react within a pre-defined voltage band, only reacting when the voltage supplying drops below the limits of this band. To prevent nuisance tripping due to short air interruptions or 'Brown Outs' the device has a built in delay of 50 milliseconds.

## Breaker accessories

The device is available as a factory mounted component or as a field mountable device. It is an extremely easy-to-fit, clip-on unit, with simple plug-in connectors.

The device have a wide voltage range, thus limiting the number of devices needed and can be used in an operating frequency of up to two operations per minute.

The release can have a life span equivalent to that of the full breakers life span.

### Connections

The connection points of both releases (UV and shunt) can be found on terminal B of both the fixed pattern and draw-out breaker types. Please refer to page 51.

### Electrical characteristics

AC	DC	Power consumption
--	24V	
48V <sup>(1)</sup>	48V	
110-130V	110-130V	Inrush
220-240V	220-240V	60 VA / 50W
380-415V	--	Holding

(1) Applicable only to shunt release

### Time delay module

The de-energizing operation of the undervoltage release can be delayed. This optional, externally mounted module has an adjustable time delay of zero to three seconds. The device can be implemented to prevent undesired breaker tripping due to momentary voltage interruptions and is connected in series with the undervoltage release.

Optionally, the EntelliGuard trip unit can be supplied with a three phase plus neutral undervoltage protection device that can provide a power interruption alarm and/or initiate a breaker 'trip'.

### Electrical characteristics

AC	DC	Power consumption
110-130V	48 V	350 VA
220-240V	110 - 130V	Inrush
380-415V	220 - 240V	60 VA Hold

### Auxiliary contacts

Auxiliary contacts are designed to indicate the position of the Air Circuit Breaker main contacts. Each EntelliGuard device is supplied with a standard package of 3 normally open (NO) and 3 normally closed (NC) contacts that operate simultaneously with the breakers main contacts. Optionally another package is available that can be used to increase the number of available contacts by replacing the standard auxiliary contact block.

### Auxiliary contact packages

Standard: 3 NO + 3 NC power rated  
Optional: 4 NO + 4 NC power rated

The devices are available as factory mounted components or as a field mountable device. Auxiliary contact packages are easy-to-fit, and have simple plug-in connectors.

### Auxiliary switch characteristics

Power rated	Nominal control voltage	Current rating
	AC 50 HZ	Non-inductive
	110/120V	Amps
	220/240V	10
	380/415V	10
	DC	5
	110/120V	5
	220/250V	0.25

### Connections

The connection points of the auxiliary contacts can be found on terminal C of both the fixed pattern and draw-out breaker types. When the standard 4 NO + 4 NC is required, only the standard terminal C is used. For other combinations terminal A needs to be ordered separately.

### Bell alarm contact

When an EntelliGuard Air Circuit Breaker has tripped due to a fault detected by the trip unit, a bell alarm changeover contact is available to indicate this. The contact can only be used when the breaker is adjusted to "Manual Reset".

### Connections

The connection points of the bell alarm contact can be found on terminal B of both the fixed pattern and draw-out breaker types.

# EntelliGuard\* L

## Breaker accessories

### Electrical characteristics

AC ratings		DC ratings	
Voltage	Amps	Voltage	Amps
250V	AC21-6A	125V	DC21-0.4A
		250V	DC21-0.2A

Minimum operating current 0.1A at 8V DC

### Spring charged and ready to close contacts

A breaker with electrical charging mechanism is equipped with a spring charged contact that closes if the spring mechanism is charged.

The second contact is ready to close indication, contact can optionally replaces the spring charge contact. It only changes the indication when the following conditions are met:

- The circuit breaker is open
  - The closing springs are charged
  - The circuit breaker is not locked/interlocked in open position
  - There is no standing closing order
  - There is no standing opening order
- Both contacts are available in a 1 NO configuration.

### Electrical characteristics

AC ratings		DC ratings	
Voltage	Amps	Voltage	Amps
250V	AC21-6A	125V	DC21-0.4A
		250V	DC21-0.2A

Minimum operating current 0.16 A at 5V DC

### Operations counter

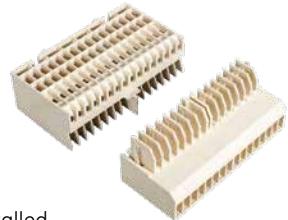

A simple and easy to install mechanical device that displays an accurate and cumulative record of the number of closing operations of the EntelliGuard Air Circuit Breaker in which it is installed.

The mechanical and electrical life span of the breaker can be extended by limited periodic maintenance. The counter contains information that can assist in determining when the breaker requires servicing.

### Terminal block

Breakers in fixed pattern, cassettes and breakers in draw-out mode are always supplied with an auxiliary connection block (terminal B and C).

When the number of factory installed accessories exceed, the available number of connection points needed, a 3rd connection block is added (terminal A) accordingly.

For connections please refer page 51.

### IP54 cover

All Air Circuit Breakers are supplied with a door flange/door frame that allows the user to finish the door cut-out professionally, simultaneously providing a protection degree of IP31.

If a higher protection degree is required, an additional cover is available allowing IP54.

### Rogowski coils

If the EntelliGuard trip unit is configured to allow earth/ground fault protection, an external neutral sensor can be required. Rogowski coils for this application are available as separate items and are supplied with a mounting kit. Rogowski are also required for sensing the set values and then allowing the trip unit to provide protection accordingly.

### Hoisting / Lifting accessories

All EntelliGuard protection devices are equipped with a set of hoisting eyes. To use these hoisting eyes with standard lifting equipment, specifically designed adaptors are available.

### Fascia pushbutton padlocking facilities

To prevent unauthorized access to both the ON and OFF push buttons on the breakers front fascia, a padlockable push button cover can be fixed to the breaker front fascia. 1 padlock of 5-8 mm can be used.

## Breaker accessories

### Cassette key lock facilities

The Air Circuit Breaker can be equipped with optional cassette key locks. The key lock system encompasses a device fitted to the cassette allowing the lock functionality. The device ensures that a draw out circuit breaker cannot be moved from the TEST or DISCONNECT position unless the key has been inserted and secured within the lock. The locks also prevent the breaker from (all positions) being switched on.

### Breaker key lock facilities

The Air Circuit Breaker can be equipped with a key lock system. The key lock system encompasses a device fitted in the front fascia allowing the locks to be fitted and to separate locks. These devices ensure that a circuit breaker cannot be closed unless the key has been inserted and secured within the lock.

### Door interlock

A device designed to prevent the door of the equipment in which the breaker is installed to be opened when the Air Circuit Breaker is in connected position. It is available in two executions; one for a door opening to the left and one to the right.

### Cassette position indication contacts

A breaker in draw-out mode has a cassette that is used for mounting and connecting. The breaker, in its moving position mode, can be inserted into the cassette and by use of the racking handle it can be moved to one of three positions; which are described below.

### Connected, test, disconnected or withdrawn

To indicate in which position the EntelliGuard breaker is located within the cassette, position indication contacts are available. The disconnected position is only being indicated when minimum isolating distances between contacts on both the main and auxiliary circuits have been achieved. Commonly referred to as carriage switches they are available as a factory mounted component or as a field mountable device.

### Connections

The device is located in the left side base of the cassette substructure and can be accessed and connected directly.

### Electrical characteristics

AC ratings		DC ratings	
Voltage	Amps	Voltage	Amps
250V	AC21-10A	125V	DC21-0.5A
		250V	DC21-0.25A

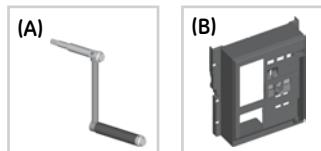

Please contact our nearest authorised service centre for other available spare parts for EntelliGuard

### Spare parts for general use

The EntelliGuard® Power Circuit breaker uses components that are designed to last the full life span of the device. However, certain components can be damaged or break during operational use. For these specific cases, the following spare parts are available:

Racking handle (A)

Breaker front cover (B)

### Spare part for maintenance purposes

Air Circuit Breakers as the EntelliGuard Power Circuit Breakers require periodic maintenance. Here, in some cases certain components critical to the device's functionality could need replacement.

Please contact our service department for specialist assistance in establishing which components need replacement and the physical replacement activities.

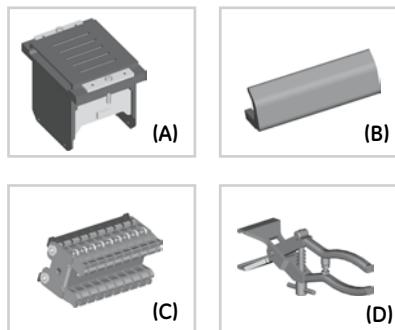

The following items are available:

Arc Chutes (A)

Fixed arcing Contacts (B)

Cassette cluster contacts (C)

Pliers to remove Cassette cluster contacts (D)

## Mechanically Interlocked Breakers

### Mechanically Interlocked Breakers

Many Low Voltage Installations have multiple power sources that are used in many different configurations. The power sources are required to supply the installation simultaneously, alternatively or in a certain logical combinations of both.

The EntelliGuard® Power Circuit Breaker can be used to protect these Power supplies and be electrically and mechanically interlocked to provide the necessary logic. The mechanical interlocks are available for fixed and draw-out circuit breakers, enabling the direct interlocking of the breakers, mounted side by side or stacked.

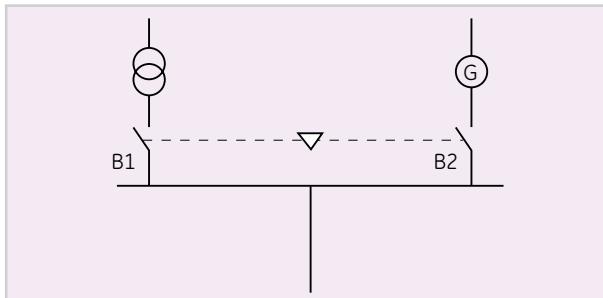

The device has two parts; the first a kit customized for use with the breaker in fixed pattern or the cassette when a draw-out pattern is required (field mountable). Two or more specially designed field mountable cables available in lengths of 1,0; 1,6; 2,0; 2,5; 3,0; 3,5 and 4,0 meters being the second.

Any combination mode (fixed or draw-out), current rating, number of poles or envelope size can be interlocked. The interlocking systems are available in one configuration for 2 breakers and in three others for 3 breakers.

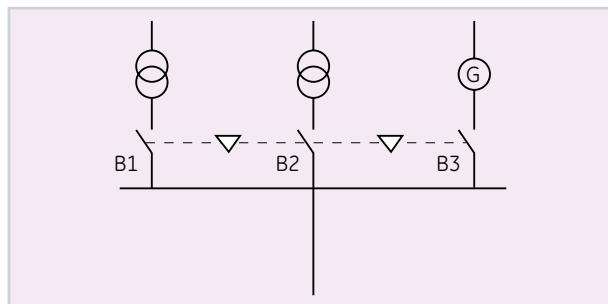

### Two Breaker Interlock

Interlock type A in which one of the two breakers (B1 or B2) can be switched ON. Each breaker must be equipped with a factory mounted interlock type A. Two cables are needed.

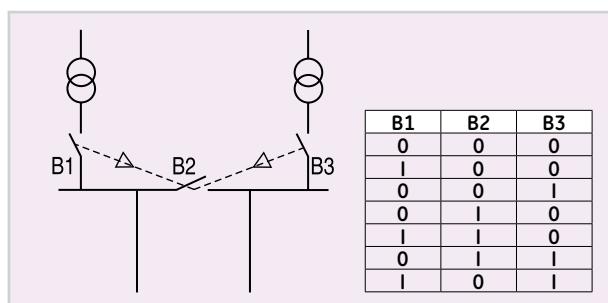

### Three Breaker Interlock type B

Interlock type B in which one of the three breakers (B1, B2 or B3) can be switched ON. Each breaker must be equipped with a factory mounted interlock type B. Six cables are needed.

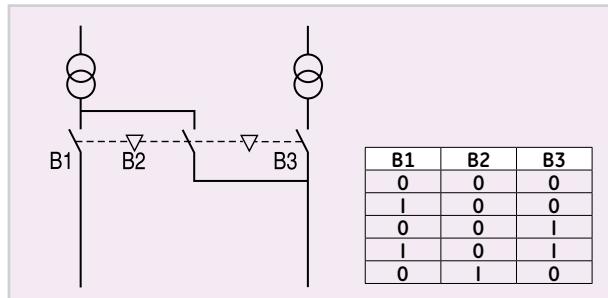

### Three Breaker Interlock type C

Interlock type C in which one or two of the three breakers can be switched ON in accordance with the inserted diagram. Each breaker must be equipped with a factory mounted interlock type C. Six cables are needed.

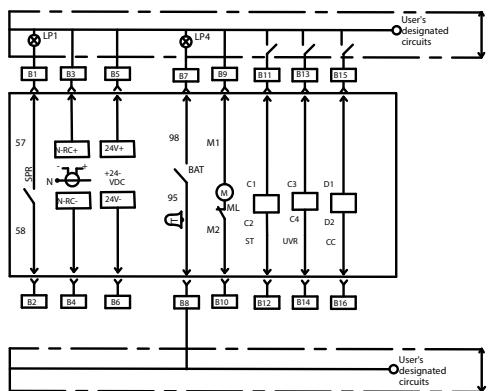

### Three Breaker Interlock type D

Interlock type D in which one or two of the three breakers can be switched ON in accordance with the inserted diagram. Breakers B1 & B3 must be equipped with a factory mounted interlock type A and B2 with a interlock type D. Four cables are needed.

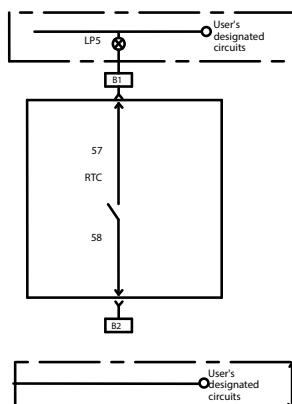

## Breaker connection scheme

**Standard connection scheme  
for terminal Block B**

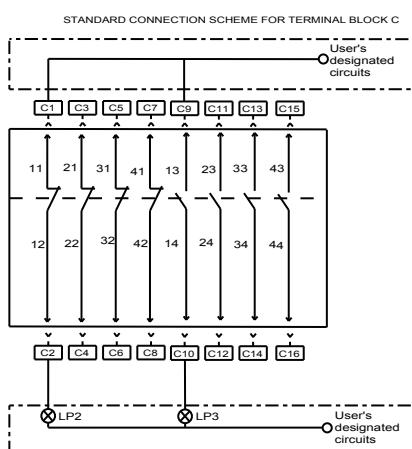

**Optional connection scheme  
for terminal Block B**

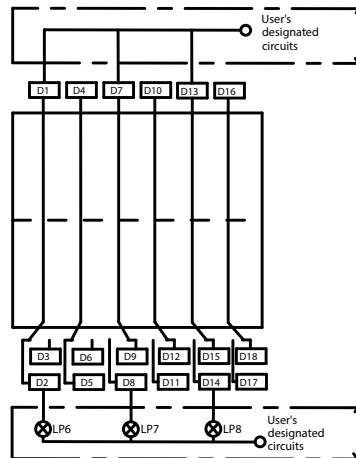

**Standard connection scheme  
for terminal Block C**

(when 3 sets of auxiliary contact  
are installed contacts 41 and 42  
are not present)

**Connection scheme  
for terminal Block D**

(Located on the side plate of the  
cassette. Depicted carriage switches  
scheme is of the two switch per  
position type)

## Index

## Handling, mounting and connecting

### Clearance distances

A modern circuit breaker is designed to interrupt high short-circuit currents in a very limited time frame. In doing so the breaker vents gas and a limited amount of conductive fragments.

EntelliGuard Air Circuit Breakers have been designed to limit the venting phenomenon to a minimum, but certain clearances do need to be taken into account as indicated in the front and side views.

The maintenance of the fixed pattern devices requires access to the contacts and the removal of the arc chutes. A certain distance needs to be left above the breaker to allow for this as indicated in the front and side views.

#### Minimum clearance distances on fixed pattern breaker from housing to:

	Metal parts	Insulated parts
A <sup>(1)</sup>	160	160
B1	30	30
B2	30	30

#### Minimum clearance distances from draw-out cassette housing to:

	Metal parts	Insulated parts
A <sup>(2)</sup>	0	0
B1	30	30
B2	30	30

(1) Dimension allows for field arc chute replacements

(2) With cassette top covers; distance without these parts 160mm

### Handling

EntelliGuard Breakers in the fixed pattern and as draw-out portion have two retractable lifting eyes. One of these is located on the breaker right hand side and second on the left hand side (please see sketch).

The cassettes have four re-enforced tilting points with M10 screw thread.

### Recommended connection cross sections

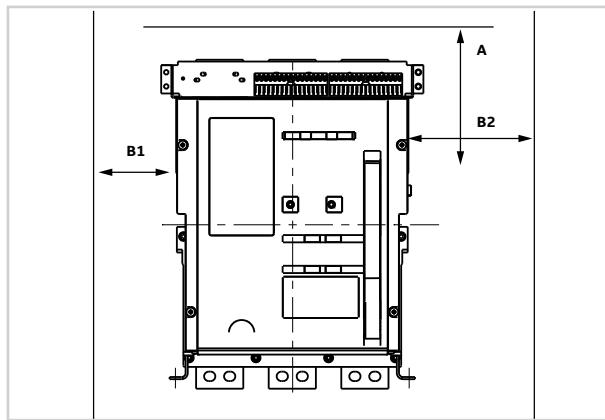

The adjacent table indicates the recommended bus bar dimensions to be used in connecting the EntelliGuard Air Circuit Breaker.

### Recommended copper busbar sizes (per phase)

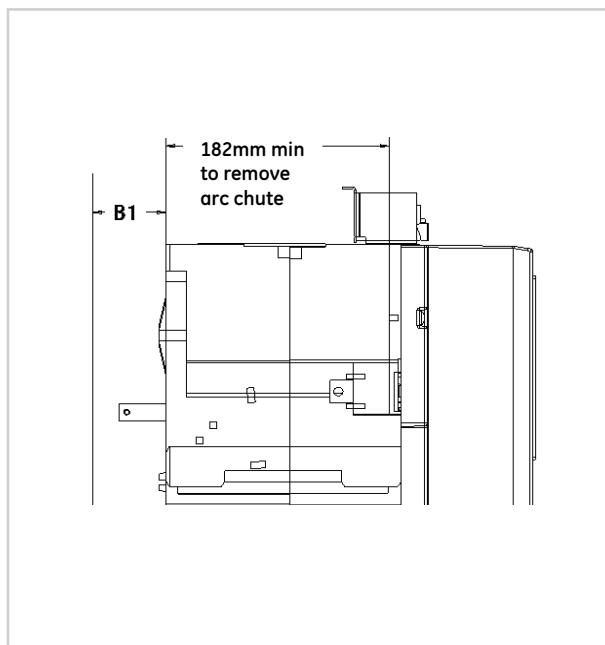

Envelope	Rating (A)	Horizontal and flat/front termination	Vertical termination
1	630	2 x 50 x 5	1 x 100 x 5
	800	2 x 50 x 5	1 x 100 x 5
	1000	2 x 60 x 5	2 x 100 x 5
	1250	2 x 50 x 10	2 x 80 x 5
	1600	2 x 50 x 10	2 x 100 x 5
	2000	3 x 50 x 10	3 x 100 x 5
	2500	N/A	4 x 100 x 5
2	2000	3 x 50 x 10	3 x 100 x 5
	2500	4 x 50 x 10	4 x 100 x 5
	3200	4 x 100 x 10	4 x 100 x 10
	4000	(1)	4 x 100 x 10 + 1 x 100 x 5

(1) Consider vertical configuration. No horizontal configuration available.

### Front view fixed or draw-out pattern

### Side view fixed pattern

### Recommended aluminium busbar sizes (per phase)

Envelope	Rating (A)	Horizontal termination	Vertical termination
1	400	2 x 40 x 8	2 x 40 x 8
	630	2 x 40 x 8	2 x 40 x 8
	800	2 x 50 x 8	2 x 50 x 8
	1000	2 x 50 x 10	2 x 50 x 10
	1250	2 x 63 x 12	2 x 63 x 12

	2000	(4)	3 x 100 x 10
2	2500	(4)	4 x 100 x 10
	2000	3 x 100 x 10	3 x 100 x 10
	2500	4 x 100 x 10	4 x 100 x 10
	3200	(4)	4 x 150 x 10
	4000	(4)	5 x 150 x 10

(3) With specifically designed Aluminium connection kit; please contact us.

(4) Consider vertical configuration. No horizontal configuration available.

## Heat dissipation, Watt loss and current ratings at temperatures >50°C

### Standards

The standard for low voltage equipment is defined in the EN 60439-1, the EN 50298 and the IEC 60890. These provide a theoretical method to calculate the temperature rise within an enclosure. The main element in these calculations is the power dissipation of the equipment installed. By totalizing this value for all the installed devices, connections, cables and busbars, it is possible to calculate the temperature rise within the enclosure. For normal applications a temperature rise within the enclosure of 50°C is assumed.

### Use

An enclosure manufacturer can provide the exact data on the allowable power dissipation within a certain enclosure. The values depend on the enclosure type, the ventilation it offers and where the components are located within this enclosure.

### EntelliGuard Air Circuit Breakers

The devices have been designed to offer the lowest, feasible heat dissipation value and the highest possible current ratings when enclosed. The tables here indicate the heat dissipation values and current ratings at temperatures within the direct vicinity of the breaker in free air.

The values apply for breakers used with rear connections and the preferred vertical busbars. The recommended connection cross sections can be found on page D.2

EntelliGuard L type	Envelope	In in A	Power loss at In per pole in Watts	Temperature in the direct environment of the EntelliGuard											
						≤50°C		55°C		60°C		65°C		70°C

# EntelliGuard® L

## Selectivity / Discrimination

### Selectivity / Discrimination

In a low voltage distribution network it is necessary that during a fault, the protection device nearest to the fault reacts whilst all others remain closed.

This capability is called discrimination or selectivity.

If this requirement is not met a fault in one arm of the distribution system could cause a number of upstream protection devices to react and open. A relatively minor fault in one arm of a complete distribution will then cause a power interruption across a major part of the installation.

### EntelliGuard Air Circuit Breakers

A combination of the high precision and multiple bands of the EntelliGuard Electronic Trip Unit allow full selectivity to be achieved between closely rated devices over multiple levels.

The table included here indicates the recommended settings of the upstream EntelliGuard Breaker as a ratio to that of the downstream protection devices.

A second table on page 45 indicates the discrimination/selectivity that can be achieved with these settings.

The tables can replace the complex and time consuming method of comparing multiple time current curves across many levels.

## Protection of standard circuits

### Protection of standard circuits

Protection devices as the EntelliGuard Air Circuit breaker are used in a wide variety of environments to protect conductors, equipment and devices in low voltage distribution circuits. To use this product to its full potential, it is necessary to verify that it functions correctly in the environment in which it is used, and that it meets the electrotechnical requirements of the circuit it protects.

### Environment

EntelliGuard will function well in almost any industrial environment and fully complies with the environmental requirements of the relevant EN60947-2 standard.

### Maximum short-circuit current

Each protective device must be capable of interrupting the maximum short-circuit current at the point where it is installed (see HD384 standard). The interruption ratings (Breaking Capacities) of the EntelliGuard circuit breaker can be found on page 3 of this catalogue.

### Design current of a circuit

The equipment and devices in an electrical circuit determine its current load or design current (lb). A circuit breaker's overload or Ir setting is normally adjusted to a value equal to the design current.

### Weakest short-circuit current in a circuit

On a short-circuit event, the total circuit impedance determines both the MAXIMUM and WEAKEST short-circuit current that can flow in the circuit.

For the weakest short circuit current, it is necessary to establish if the protection device trips before the electrical conductors reach their maximum temperature, this for operating times of 0.1 to 5 seconds.

### Fault currents

In the 2005 edition of the IEC60364-4-41 the general terminology, 'Protection against Electrical shock' has been adapted whilst two new terms have been introduced:

1) Protection under normal conditions now designated:

#### Basic protection

2) Protection under fault conditions now designated:

#### Fault protection

Fault protection being provided by protective equipotential bonding and automatic disconnection of the supply. Under fault conditions, depending on the network an interruption time of 5 seconds (TN) or 1 second is required (TT) for circuits with a rating >32A. Depending on the configuration of the earthing system, the 1 and 5 second disconnection time is also required for interruption of a second fault in IT systems.

### EntelliGuard Air Circuit breakers

To protect standard circuits, the breakers are equipped with a number of protection devices.

### Overload protection device

First highly accurate menu driven overload protection device that has an adjustment range of 0.4 to 1 x the breaker rating, in thirteen steps.

This device is normally set to a value that is equal or closely matches the design current (lb).

### Timed short-circuit protection device

Set as a multiple of the overload adjustment. This device offers a broad adjustment range of 1.5 to 12.

The setting of this device depends on several parameters:

- inrush characteristics of the protected devices
- protection against the **weakest short-circuit current**
- fault currents to earth

17 narrow and accurate time bands allow the EntelliGuard Air Circuit Breaker to interrupt a fault within the timing required by the standards. to offer selectivity across multiple levels and allow the user to take inrush currents into account.

### Ground fault protection

It is possible to combine two devices to detect **fault currents** to earth. They can be set as a multiple of the value of the current sensors mounted in the breaker and have a broad adjustment range of 0.2 to 1 times the breaker rating.

The first is a residual device that takes the sum of the current in three phases and neutral. If this is no longer equal to zero it sends an alarm or trips the breaker.

The second allows the user to measure the return current running between the earth leg and neutral. On detecting a fault to earth, the device sends an alarm, or trips the breaker.

14 narrow and accurate time bands allow the EntelliGuard Air Circuit Breaker to interrupt a fault within the timing required by the standards and offer selectivity across multiple levels.

### Instantaneous short-circuit protection

Set as a multiple of the primary overload adjustment ie this device offers a broad adjustment range of 2 to 15.

This device is normally used to limit the time that higher short-circuit currents can run in the protected circuit. Whilst the timed short-circuit protection device waits for a set time, the instantaneous device immediately trips the breaker once the set value is reached.

The device used in the EntelliGuard Air Circuit Breaker maintains selectivity by only reacting to the 2nd half wave of a short-circuit current and uniquely allows the use of the 'Zone Selective Interlock' feature.

## Applications

### Protection of generator sets, motors, capacitor banks and transformers

#### Use of EntelliGuard Breakers in Automatic Power Transfer Systems (ATS)

##### Introduction

The electronic trip unit used in the EntelliGuard Air Circuit Breaker offers many additional protection devices. Here number of the possible applications of these devices are described briefly.

##### Protection of generator sets

The overload and short-circuit devices used to protect a generator need to react quicker and at lower current levels than those used to protect other devices.

After establishing, the capabilities of the generator are set under overload and short-circuit conditions. The protection devices need to be adjusted accordingly.

On a Air Circuit Breaker use of the 'faster' overload protection bands (LTDB set between minimum and the C6 band) and a low setting of the timed short-circuit protection ( $2.5 \times I_r$ ) is recommended. The optional 3 phase undervoltage protection available in the GT-H trip unit can also be considered.

##### Protection of motors

On starting, electrical motors draw more current than when running under normal conditions. These starting currents differ strongly per type and should not cause tripping of the device protecting the circuit.

The IEC60947-4 has defined four different 'Operational' or 'Trip' classes:

Trip class	Required tripping times at		
	$1.2 \times I_n$	$1.5 \times I_n$	$7.2 \times I_n$
10A	$t < 2$ hours	$t < 2$ min.	$2 \leq t < 10$ sec.
10	$t < 2$ hours	$t < 4$ min.	$4 \leq t \leq 10$ sec.
20	$t < 2$ hours	$t < 8$ min.	$6 \leq t \leq 20$ sec.
30	$t < 2$ hours	$t < 12$ min.	$9 \leq t \leq 30$ sec.

This table is in some cases extended to include a 'Trip class 40' (assumed to be a 15-40 second band at  $7.2 \times I_n$ ).

On a Air Circuit Breaker, use of the 'slower' protection bands that closely match the indicated classes is recommended (LTDB set between the C8 to the C22 band).

Switching on a motor also produces a high but very short inrush peak current which could activate the short-circuit protection of a breaker and cause unexpected tripping. Here the timed short-circuit device of a Air Circuit Breaker must be set to at least  $12 \times I_r$  with a time delay of 50 milliseconds (STDB band 3). If an instantaneous protection device is present and switched on, a setting of at least  $12 \times I_e$  is recommended.

After an overload event, if motor and wiring are still warm, a immediate re-energization of the electrical circuit could result in damage of the electrical circuit and the motor.

The overload protection device must incorporate a thermal memory device that prevents re-energization before a certain cooling time has elapsed.

##### Remark

Furthermore, the prevention of anomalies as the motor losing a phase or a motor with blocked rotor need to be prevented and require additional protection devices.

Next to the 'Standard' protection devices, the EntelliGuard Electronic Trip Unit has a thermal memory function, an optional 3 phase undervoltage relay and current unbalance device, thus providing comprehensive motor protection.

##### Protection of capacitor banks

Air Circuit Breakers are designed to offer high making and breaking capacities under adverse conditions: The switching of capacitor banks has little to no effect on the breaker, its characteristics as a protective device or on its lifespan.

However the current flowing in the circuit can trip a circuit breaker and a capacitor load does display certain anomalies. Here the current flowing in the circuit cannot be assumed to be the calculated capacitor current only. The effective current value is higher due to harmonic content (normally assumed as 30%) and an allowance must be made for tolerances in the capacitance of the units (10%). The protection devices of the Air Circuit Breaker must be set accordingly.

##### Protection of LV / HV transformers

Transformers generally produce a very high inrush current. The crest values of the first half cycle may reach values of 15 to 25 times the normal rated current.

Manufacturers data and tests have indicated that, a protection device feeding a transformer must be capable of carrying the following current values without tripping.

Transformer value	Crest inrush values		
	1st period	2nd period	After 3 periods
$< 50$ kVA	$25 \times I_n$	$12 \times I_n$	$5 \times I_n$
$\geq 50$ kVA	$15 \times I_n$	$8 \times I_n$	$3.5 \times I_n$

It is recommended that the timed short-circuit device of a Air Circuit Breaker is set to at least  $8 \times I_r$  with a time delay of 30 milliseconds (STDB band 1). If an instantaneous protection device is present, the use of the extended adjustment range with setting of  $20 \times I_e$  is advisable ( $=15 \times I_n$  plus tolerances).

##### Automatic Transfer Systems (ATS)

EntelliGuard Air Circuit Breakers are available with mechanical interlocks for 2 to 3 breakers and have a unique electrical network interlocking system allowing the user to completely lock out one or more breakers.

The logical transfer of power from one source to another is thus strongly simplified whilst the high speed electrical closing and opening of the device allows their use in synchronization applications.

Here, numerous other EntelliGuard protection features can be used, one of which being the Electronic Trip unit 3 phase undervoltage release. This is to establish if voltage on a certain power source is present and if a generator set has reached its nominal voltage.

# EntelliGuard<sup>\*</sup> L

## Environmental considerations

### Ambient temperature

EntelliGuard Air Circuit Breakers are designed to operate normally at temperatures of -5 degrees to +70°C. They can be used at temperatures down to -20°C with a reduced electrical and mechanical life span.

To prevent materials from reaching temperatures that have an adverse effect on their electrical and/or mechanical properties, de-rating factors must be applied when the device is used in ambient temperatures higher than 50°C.

### Storage temperature

Air Circuit Breakers can be stored at non operational temperatures of -40° degrees up to +70°C.

### Influence of altitude

Up to an altitude of 2000m above sea level no de-rating of breaker rated current or rated voltage is applicable. For altitudes above 2000m the following de-rating factors apply:

Altitude	Altitude correction factors		
	≤ 2000M	2500M	4000M
Voltage (Ue)	1	0.95	0.80
Current (In)	1	0.99	0.96

### Other atmospheric conditions

The EntelliGuard breaker line has been designed to operate at the temperatures and relative humidities defined in the EN 60947 clause 6.1.3.1.

They also meet the requirements of the following standards:

IEC 68-2-1	Cold
IEC 68-2-2	Dry heat
IEC 68-2-3	Damp heat
IEC 68-2-11	Salt
IEC 68-2-14	Change of temperature
IEC 68-2-30	Damp heat cyclic
IEC 721	Climatic

### Vibration

Air Circuit Breakers meet the vibration requirements of the following standards:

IEC 68-2-6	Vibration
------------	-----------

### Other

All EntelliGuard devices meet the existing European ROHS directive.

### Electromagnetic compatibility

The EntelliGuard Air Circuit Breaker and its electronic trip unit meet the most stringent requirements of the EN 60947-2 and IEC 1004 standard. The following tests have been successfully completed.

### Harmonics, current dips, interruptions and power frequency variations

All EN 60947 annex F, sub-clause F4.1 through 3 requirements covering non sinusoidal currents resulting from harmonics are met. Testing covering the following elements:

- wave forms consisting of a fundamental + 3rd harmonic component at 50 and 60Hz
- wave forms consisting of a fundamental + 5th harmonic component at 50 and 60Hz
- composite wave forms with a fundamental component + a 3rd, 5th and 7th harmonic at 50 and 60Hz
- current dips and current interruptions
- frequency variations from 45 to 65Hz in 1 Hz steps

### Electrostatic discharge

EN 60947 annex F, sub-clause F and the IEC 1004-2

- passed level 4, air discharge 15kV

### Radiated, radio frequency, electromagnetic field immunity test

EN 60947-2 annex F, sub-clause F7 and the IEC 1000-4-3 (basic standard)

- passed higher than level 4 field strength 30V/m

### Electrical fast transient / Burst

EN 60947-2 annex F, sub-clause F5 and the IEC 1000-4-4 (basic standard)

- passed level 4 burst peak voltage 4kV

### Surge immunity test

EN 60947-2 annex F, sub-clause F5 and the IEC 1000-4-5 (basic standard)

- passed level 4 voltage 1.2μs/50μs 6kV; current 8μs/20μs 3kA

### Dry heat test

EN 60947-2 annex F, sub-clause F8

- passed all test requirements

### Thermal shock test

EN 60947-2 annex F, sub-clause F9

- no nuisance tripping within the 28-day temperature cycles

Since Thomas Edison patented the world's first circuit breaker, Industrial Solutions has been transforming the future of electrification. We design electrical solutions at the crossroads of digital and industrial – smart, rugged and equipped to control electricity from the grid to its point of use. Every day, we partner with our customers to solve their toughest energy challenges and reimagine industry in a way that only the world's digital industrial company can.

## **Belgium**

GE Industrial Belgium  
Nieuwevaart 51  
B-9000 Gent  
Tel. +32 (0)9 265 21 11

## **Finland**

GE Industrial Solutions  
Kuortaneenkatu 2  
FI-00510 Helsinki  
Tel. +358 (0)10 394 3760

## **France**

GE Industrial Solutions  
204, Rue du Rond-Point du Pont de Sèvres  
F-92100 Boulogne-Billancourt  
Tel. +33 (0)800 912 816

## **Germany**

GE Industrial Solutions  
Robert-Bosch Str. 3  
D-50354 Hürth-Efferen  
Tel. +49 (0) 2233/ 9719-0

## **Hungary**

GE Hungary Kft.  
Vaci ut 81-83.  
H-1139 Budapest  
Tel. +36 1 447 6050

## **Italy**

GE Industrial Solutions  
Centro Direzionale Colleoni  
Via Paracelso 16  
Palazzo Andromeda B1  
I-20864 Agrate Brianza (MB)  
Tel. +39 039 637 371

## **Netherlands**

GE Industrial Solutions  
Parallelweg 10  
NL-7482 CA Haaksbergen  
Tel. +31 (0)53 573 03 03

## **North Africa**

General Electric International,  
sq Inc. (Succursale)  
Crystal Building 3,  
3rd Floor, Marina Casablanca,  
20050 Casablanca, Morocco  
Tel. +212 529 025 502

## **Norway**

GE Industrial Solutions  
Drammensveien 165  
0277 Oslo  
Tel. +47 (0)8 001 72 56

## **Poland**

GE Power Controls  
Gdanski Business Centre  
Inflancka 4C, bud. D  
00-189 Warszawa  
Tel. +48 22 520 53 53

## **Rudawka 96**

43-382 Bielsko-Biała  
Tel. +48 33 828 62 33

## **Russia**

GE Industrial Solutions  
27/8, Electrozavodskaya street  
Moscow, 107023  
Tel. +7 495 937 11 11

## **South Africa**

GE Industrial Solutions  
Unit 4, 130 Gazelle Avenue  
Corporate Park Midrand 1685  
P.O. Box 76672 Wendywood 2144  
Tel. +27 11 238 3000

## **Spain**

GE POWER CONTROLS IBÉRICA, S.L.  
Calle Miño 122 Naves E-F  
Polígono Industrial Santa Margarita  
08223 Terrassa (Barcelona)  
Tel. +34 900 993 625

## **Sweden**

GE Industrial Slutions  
Vendevägen 89  
SE-182 32 Danderyd  
Tel. +46 (0)20 79 16 70

## **United Arab Emirates**

GE Industrial Solutions  
Injaz Building, 3rd Floor  
Dubai Internet City  
PO Box 11549, Dubai  
Tel. +971 4 4546912

## **United Kingdom**
